What the Ethical Parliament can do

CONTESTED RECOMMENDATION

Pull the lever
Presently favored action

0.81
Policy support — plurality, not unanimity

0.65
Epistemic confidence

1 vs 5
Certain deaths on the graph

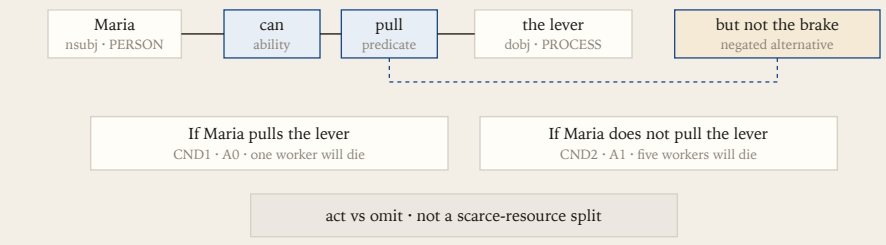

Parliament is not a single moral oracle. Given a written dilemma, it first builds a **shared world** from the sentences — who acts, what is scarce, what happens if — then lets five independent ethical viewpoints argue from that world. Extra stories that are not in the graph are marked hypothetical and lose vote weight. The output still shows disagreement, conditions, and what would change the answer.

1 English dilemma → 2 Syntax + exclusivity → 3 Admitted world graphs → 4 Five independent lenses → 5 Contested judgment

THE CASE, AS WRITTEN

Five workers are on the track. One worker is on the side track. Maria can pull the lever, but not the brake. If Maria pulls the lever, one worker will die. If Maria does not pull the lever, five workers will die.

Syntax of the hard sentence

"Can" is ability, not obligation. "But not the brake" blocks a second control; it is not "but not both." Omission is recovered as a live action, not treated as doing nothing.

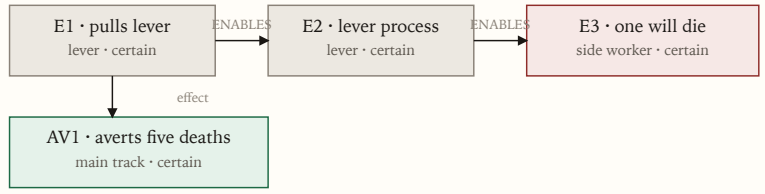

WHAT GETS ADMITTED

Parser proposes; Parliament admits. This run used a frozen world — 0 world-generation calls — so agents argued on the committed graph, not a regenerated one. Chosen blueprint: omission_harm.

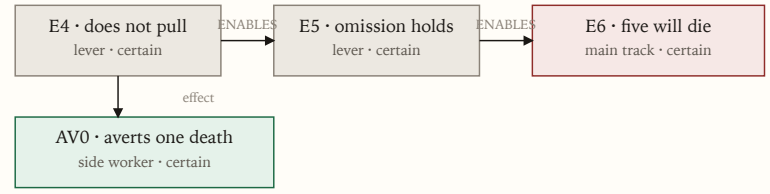

STATUS	ON THIS CASE
■ Established	Pulling kills one (E3). Not pulling kills five (E6). Averted-alternative harms AV0 / AV1.
■ Unresolved	If-antecedents CND1 / CND2 stay as branch scope, not extra facts.
■ Hypothetical	"Pulling the lever diverts the train." Used by several lenses; not a graph node.

Each action is a chain: the lever act or omission, then a certain death, plus an averted death on the other track. Green = averted harm, red = death. Counts on-graph: 1 vs 5, certain.

A0 · pulls the lever

A1 · does not pull the lever

FIVE LENSES, NOT FIVE COPIES

Cycle-3 preference mass (0–1). Deontology does not collapse into the numbers vote.

INDEPENDENT QUESTIONS THEY ACTUALLY ASKED

LENS	THE QUESTION	LEAN	ADMITTED VOTE
Utilitarian	How many net lives? Five saved minus one killed.	Pull	Full — cites E3, E6, AV0, AV1
